

Port Bridge over FPL Discharge Canal Fort Lauderdale, Florida

Client: Mr. William Maughan
Broward County Seaport Construction & Planning Division
1850 Eller Drive, Fifth Floor
Fort Lauderdale, Florida 33316

Construction Cost
\$60,000,000.00

The proposed project is located within Port Everglades, Broward County.

The proposed project is to construct a concrete span bridge over the FPL Discharge Canal, to connect SE 19 Avenue to SE 18 Avenue to alleviate transport and cruise passenger congestion on Eller Drive and to allow better access to the east container yard.

The Chappell Group provided a seagrass study of the submerged bottom, in addition to a site investigation to determine any potential impacts to natural resources including mangroves located within the proposed bridge construction footprint. The Chappell Group provided all the environmental permitting services, including floating dock design and mangrove planter design, and conducted construction inspection services to ensure compliance with the environmental regulatory agencies during construction.

The Chappell Group, Inc. performed these tasks for Broward County from 2005 through February 2009 and will continue to provide construction observation through 2010.
